

Developer Portfolio Specification

Architectural Directive for Minimalist SaaS Aesthetic Implementation

1. System Architecture & Configuration

This document serves as an explicit parsing standard for code generation prompts or programmatic scaffolding. All generated components must strictly adhere to the project ecosystem and style constraints outlined below.

DIRECTORY TREE STRUCTURE

```

```

DESIGN TOKENS (TAILWIND CSS ENGINE)

Inject the following color definitions and configurations into the project context to ensure compliance with a dark-mode premium interface standard:

```
const tailwindConfig = {
  theme: {
    extend: {
      colors: {
        background: '#09090b', // Primary pitch-black canvas node
        surface: {
          DEFAULT: 'rgba(24, 24, 27, 0.4)', // Translucent zinc-900 foundation
          hover: 'rgba(39, 39, 42, 0.6)', // Highlighting interact layer
        },
        border: 'rgba(63, 63, 70, 0.4)', // Soft structural border delineation
      },
      fontFamily: {
        sans: ['var(--font-geist-sans)', 'sans-serif'],
        mono: ['var(--font-geist-mono)', 'monospace'],
      },
    },
  },
};
```

2. Bento Grid Layout Canvas

The root component container inside `app/page.tsx` maps out structural blocks across a grid framework. Layout engine constraint properties should align to: `grid grid-cols-1 md:grid-cols-3 gap-6 max-w-6xl mx-auto px-4 py-16`.

The Hero Component Header

`col-span-1 md:col-span-3`

Centered structure layer utilizing maximum visual width blocks. Render main header copy utilizing typography gradient modifiers: `bg-gradient-to-r from-white via-zinc-200 to-zinc-500 bg-clip-text text-transparent`.

- **Core Subtext Content:** Full-stack design solutions, platform scaling, cross-device client optimization.
- **Visual Asset Indicator:** System status badge emitting a slow looping breath animation sequence using green radial glowing properties.

Flagship Project Module (Circular Dorms)

md:col-span-2 row-span-2

A double-width tile configured with structural state machine mechanics to manage a binary interface display value: `'preview' | 'architecture'`.

- **Preview Target State:** High-fidelity mock browser wireframe illustrating a live platform deployment of the university distribution and inventory automation platform.
- **Architecture Layer State:** Graph layout highlighting design implementations regarding system modular encapsulation, multi-tenant databases, and data optimization nodes.

Ecosystem Stack Inventory Matrix

md:col-span-1

A compact categorization dashboard using structural tag groupings organized by functional engineering layers:

- **Frontend Core Layers:** Next.js, React Native, TypeScript, Tailwind CSS.
- **Backend Processing & Interfaces:** Node.js, Go, REST/GraphQL endpoints, secure identity integration flows (OIDC / OAuth 2.0 paradigms).
- **Animation Engine:** Transform interactions processing discrete item scale modifiers on active cursor focus: `hover:scale-105 transition-transform duration-200`.

Modular Ecosystem & Testing Node

md:col-span-1

Uses Next.js Server Components async data retrieval processes to populate a real-time system monitoring panel.

- **Visual Layout:** Simulates a clean micro-service dashboard that logs system status reports, endpoints, and identity confirmation sequences.
- **Data Attributes:** Renders active connections, platform ping indicators, and state validations representing integration milestones.

Chronological Professional Timeline

md:col-span-2

Displays an structured progress trail bounded by a low-opacity structural reference axis (`bg-zinc-800`).

- **Primary Target Node:** Professional industry attachment milestone. Logs functional responsibilities, active system execution logs, development task assignments, and verification files.
- **Academic Baseline Track:** Computer Science track mapping. Tracks engineering coursework, systems architecture design tasks, and implementation principles.

3. Application Control Layer

COMMAND OVERLAY MATRIX (GLOBAL LISTENERS)

Instantiate a structural modal intercept trigger reading specific input codes globally: `meta+k` or `ctrl+k` . Once evaluated true, toggle an interface layer over the application viewport utilizing glassmorphism background processing values (`backdrop-blur-xl bg-zinc-950/80`).

- **Structural Routing Shortcuts:** Provide direct keyboard tracking links to execute instant page scrolls to targeted card arrays (e.g., jump directly to `Circular Dorms` workspace view).
- **Functional Executions:** Provide helper items that directly copy developer contact data to local text clipboards or invoke a download flow for the technical CV artifact.
